

Technical Alert

Addition of version control to compositional guideline template

At the request of Complementary Medicines Australia, the TGA have added version control to the template for compositional guidelines for listed medicine ingredients, as per the below:

Version	Description of change	Effective date

This addition will assist in document change management. It will assist members in understanding when a compositional guideline was introduced including when and why updates were made.

The updated template for applicants is available on the TGA website [here](#).

Members are encouraged to forward any identified issues to technical@cmaustralia.org.au for attention by the Committee Secretariat.
